EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: Correct status identifier for claim 1 to "previously presented".

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: Applicant claims an improved phosphor structure for an electroluminescent display comprising a phosphor laminate of a blue light emitting phosphor thin film layer; a fluoride containing layer provided directly adjacent and in contact with the phosphor thin film layer, wherein the fluoride containing layer is provided on the top and/or bottom of the phosphor thin film layer and fluorine from the fluoride containing layer is partially infused into the phosphor thin film layer; wherein the light emitting phosphor thin film layer is selected from the group consisting of a rare earth metal activated barium thioaluminate and a rare earth metal activated magnesium barium thioaluminate.

3. Additionally, applicant claims a thick film dielectric electroluminescent device constructed on a glass or glass ceramic substrate comprising a europium activated barium

Art Unit: 1786

thioaluminate or magnesium barium thioaluminate phosphor film, wherein the phosphor film is in contact with at least one fluoride containing thin film.

4. Applicant also claims an electroluminescent display comprising a substrate comprised of glass or glass ceramic; a metal conductor layer; a smoothing layer; an annealed phosphor laminate of a blue light emitting phosphor thin film layer and a fluoride containing layer provided directly adjacent and in contact with the phosphor thin film layer wherein the fluoride containing layer provided on the top and/or bottom of the phosphor thin film layer and fluorine from the fluoride containing layer is partially infused in the phosphor thin film layer; and the blue light emitting phosphor thin film layer is selected from a group consisting of a rare earth metal activated barium thioaluminate and a rare earth metal activated magnesium barium thioaluminate.

5. The closest prior art is Takahashi et al., U.S. Patent Number 5,142,192 and Yano et al., U.S. Patent Number 6,699,596. Takahashi discloses an electroluminescent element that includes insulating layers on both sides of a luminous layer wherein the luminous layer comprises a blue light emitting phosphor and the insulating layer comprise fluoride containing material such as magnesium fluoride. Takahashi fails to teach or suggest that the blue light emitting phosphor is a rare earth activated barium thioaluminate or rare earth activated magnesium barium thioaluminate. Additionally, Takahashi fails to teach or suggest that the fluorine from the fluoride containing layer is partially infused in the phosphor layer.

6. Yano discloses a blue full color EL display comprising a phosphor thin film wherein the phosphor thin film is a barium thioaluminate or magnesium barium thioaluminate with europium added as the activator. Yano also discloses that the phosphor film is sandwiched between two

Art Unit: 1786

insulating layers. However, Yano fails to teach or suggest that the insulating layers are fluoride containing layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
